

Speaker Bracket Instructions

Use these holes to mount the bracket directly to the speaker. Both holes must be used for proper operation.

NOTE: If using machine threads in back of speaker, this must be removed.

If your speaker cabinet features a threaded insert, use this one or one of the other included machine screws to attach your speaker.

Tighten these swivel points when the desired position is obtained.

NOTE: If mounted incorrectly, undue stresses on critical weight-bearing angles can cause failure!
